ZYNOVIX TECH SOLUTIONS

SERVICE PAGES DESIGN & SEO PLAN

Client Approval Document | Six Service Landing Pages

Prepared for review, feedback and approval

1. Project Overview

This document presents the proposed page structure, content direction, SEO targeting and conversion elements for six Zynovix Tech Solutions service pages. The objective is to create clear, professional landing pages that explain each service, build trust and encourage relevant enquiries.

Project Goals

- Create six consistent, responsive and user-friendly service pages.
- Give each page a distinct primary keyword and search intent.
- Explain service scope, features, process, use cases and business value.
- Use genuine screenshots, diagrams, portfolio items and verified proof points.
- Add clear, service-specific enquiry or demo calls to action.
- Publish only accurate service claims, features, integrations and results.

2. Common Page Design Structure

Page section	Recommended content
Hero section	Service-specific H1, short introduction, primary/secondary CTA and relevant visual.
Problem / need	Explain the customer's common challenge and why the service is relevant.
Services and features	Present deliverables, modules and capabilities in scannable cards or sections.
Process	Show the steps from discovery and planning through delivery and support.
Proof and visuals	Use real project screenshots, product previews, diagrams, testimonials or labelled demos.
FAQs	Answer practical questions about pricing, timeline, customization, integrations and support.
Final CTA and form	Repeat the main action and collect only information needed for a useful follow-up.

Visual Direction

- Use the existing Zynovix brand identity and consistent typography, spacing and button styles.
- Prefer clean B2B technology layouts with readable contrast and generous whitespace.
- Use service-specific dashboard screenshots, UI mockups and architecture/process diagrams.
- Create reusable components: hero, feature cards, process timeline, FAQ accordion, CTA band and enquiry form.
- Ensure responsive behaviour, accessibility and fast loading on mobile and desktop.

3. Individual Page Plans

1. Custom Website Development

Proposed URL: /services/custom-website-development/

Primary keyword: Custom website development

Supporting keywords: Business website development; responsive web design; custom web application development; website redesign.

Hero content direction

Suggested H1: Custom Website Development for Growing Businesses

Build a professional, responsive website tailored to your business goals—from corporate websites and e-commerce stores to custom web applications.

CTA: Discuss Your Project | View Our Work

Recommended sections

- **Hero:** Headline, short value proposition, two CTAs and a laptop/mobile website mockup.
- **What We Build:** Corporate websites, e-commerce websites, custom web applications, customer/employee portals, landing pages and website redesign.
- **Features & Capabilities:** Responsive design, SEO-friendly structure, performance optimization, CMS, API integrations, security and maintenance.
- **Development Process:** Discovery → UI/UX design → Development → Testing → Launch → Maintenance.
- **Portfolio / Proof:** Real project screenshots, project objectives, delivered solution and verified outcomes. Clearly label concept/demo work.
- **FAQs & Enquiry:** Pricing, timelines, revisions, SEO, maintenance and post-launch support; finish with a project enquiry form.

Suggested enquiry form fields: Name, work email, company, website type, estimated budget and project description.

SEO metadata draft

Title tag: Custom Website Development Services | Zynovix

Meta description: Get a custom, responsive website tailored to your business goals. Explore website development, redesign and custom web application services from Zynovix.

2. Frappe & ERPNext Solutions

Proposed URL: /services/frappe-erpnext-solutions/

Primary keyword: Frappe ERPNext solutions

Supporting keywords: ERPNext implementation; ERPNext customization; Frappe development; ERP software implementation; ERPNext support.

Hero content direction

Suggested H1: Frappe & ERPNext Solutions for Smarter Business Operations

Simplify business operations with ERPNext implementation, Frappe customization and integrated workflows designed around your business processes.

CTA: Book an ERP Consultation | Explore ERPNext Capabilities

Recommended sections

- **Hero:** ERP-focused headline, concise introduction and ERP dashboard visual.
- **Business Challenges:** Disconnected tools, manual invoicing/reporting, inventory visibility issues, repetitive data entry and limited cross-team visibility.
- **ERPNext Modules:** Accounting, sales/CRM, purchasing, inventory, manufacturing, HR/payroll and reports—include only modules within the actual offering.
- **Frappe Customization:** Custom DocTypes, forms, workflows, permissions, reports, print formats and business-specific applications.
- **Implementation Process:** Requirement analysis → Module planning → Configuration/customization → Data migration → Testing/training → Go-live → Support.
- **Integrations, FAQs & CTA:** Explain supported integrations, migration and support. Answer customization, timeline and data migration questions; include consultation form.

Suggested enquiry form fields: Name, work email, company, business type, current system, modules required and project timeline.

SEO metadata draft

Title tag: Frappe & ERPNext Implementation and Customization | Zynovix

Meta description: Explore ERPNext implementation, Frappe customization, business workflow automation and system integration solutions for your operations.

3. Hotel Management Software

Proposed URL: /services/hotel-management-software/

Primary keyword: Hotel management software

Supporting keywords: Hotel management system; hotel booking management software; hotel front desk software; hotel billing software; property management system.

Hero content direction

Suggested H1: Hotel Management Software to Simplify Daily Operations

Manage reservations, room availability, guest information and front-desk activities through a streamlined hotel management solution.

CTA: Request a Software Demo | Explore Features

Recommended sections

- **Hero:** Hospitality-focused headline and a real or clearly labelled demo booking/room-management dashboard.
- **Who It Serves:** Hotels, boutique properties, resorts, guest houses and other accommodation providers supported by the solution.
- **Main Features:** Room availability/reservations, guest profiles, check-in/check-out, billing, housekeeping status and occupancy/revenue reports.
- **How It Works:** Booking received → Room assigned → Guest check-in → Billing → Check-out → Reporting.
- **Product Preview:** Booking calendar, room status, guest details and billing screenshots; optionally include a short walkthrough.
- **Benefits, FAQs & CTA:** Explain workflow benefits without unsupported metrics. Cover customization, training, deployment, security and pricing; use a demo form.

Suggested enquiry form fields: Name, work email, property name, number of rooms, contact details and required features.

SEO metadata draft

Title tag: Hotel Management Software for Reservations & Front Desk | Zynovix

Meta description: Explore hotel management software for room reservations, guest records, check-in/check-out, billing and daily hospitality operations.

4. Custom Business Software

Proposed URL: /services/custom-business-software/

Primary keyword: Custom business software development

Supporting keywords: Business process automation software; bespoke software development; custom enterprise software; business management system; internal business applications.

Hero content direction

Suggested H1: Custom Business Software Built Around Your Workflow

Replace disconnected tools and repetitive manual processes with tailored software designed for your business requirements and operational workflows.

CTA: Discuss Your Requirements | Explore Solutions

Recommended sections

- **Hero:** Clear business-focused headline, short value proposition and software/dashboard visual.
- **Business Problem:** Conceptual before/after comparison: spreadsheets and disconnected tools versus centralized information and structured workflows.
- **Types of Software:** Business management applications, admin panels, customer portals, inventory tools, reporting systems and workflow automation.
- **Features:** Role-based access, custom forms, approval workflows, notifications, reporting, database design, integrations and scalable architecture.
- **Development Process:** Requirements discovery → Process mapping → Prototype → Development → User testing → Deployment → Improvement.
- **Use Cases, FAQs & CTA:** Show realistic use cases based on actual capabilities. Cover custom vs ready-made software, ownership, timelines, scalability and maintenance.

Suggested enquiry form fields: Name, work email, company, business challenge, required functionality and estimated timeline.

SEO metadata draft

Title tag: Custom Business Software Development Services | Zynovix

Meta description: Build custom business software, internal dashboards and workflow applications designed to simplify operations and support business processes.

5. API & System Integrations

Proposed URL: /services/api-system-integrations/

Primary keyword: API integration services

Supporting keywords: System integration services; REST API development; ERP integration; third-party API integration; payment gateway integration; webhook integration.

Hero content direction

Suggested H1: API & System Integration Services for Connected Business Systems

Connect existing applications, business platforms and third-party services with integrations designed to improve data flow and reduce manual work.

CTA: Discuss an Integration | View Integration Capabilities

Recommended sections

- **Hero:** Integration-focused headline and diagram connecting a website, ERP, payment gateway, CRM and database.
- **Integration Problems:** Duplicate data entry, disconnected tools, delayed updates, inconsistent records and manual reconciliation.
- **Integration Services:** REST API development/integration, ERPNext integrations, e-commerce integrations, payment gateways, webhooks and data synchronization.
- **Architecture & Workflow:** Source system → Authentication/API → Validation/transformation → Destination system → Monitoring/error handling.
- **Security & Reliability:** Authentication, permissions, input validation, retries, logging, monitoring and documentation where these are delivered.
- **Use Cases, FAQs & CTA:** Examples such as website-to-ERP order sync or payment updates. Cover supported APIs, legacy systems, security and support.

Suggested enquiry form fields: Name, work email, company, systems to connect, data to synchronize and API documentation availability.

SEO metadata draft

Title tag: API Integration Services & System Connectivity | Zynovix

Meta description: Connect ERP systems, websites, payment gateways and third-party platforms with API integration, data synchronization and workflow automation.

6. Cloud Hosting & Maintenance

Proposed URL: /services/cloud-hosting-maintenance/

Primary keyword: Cloud hosting and maintenance services

Supporting keywords: Cloud server management; website maintenance services; cloud infrastructure management; application hosting; server monitoring and backups.

Hero content direction

Suggested H1: Cloud Hosting & Maintenance for Reliable Business Applications

Maintain websites and business applications with hosting setup, deployment support, monitoring, backups and ongoing technical maintenance.

CTA: Discuss Hosting Requirements | Explore Maintenance Services

Recommended sections

- **Hero:** Concise hosting/maintenance proposition with an infrastructure or monitoring visual.
- **Hosting & Maintenance Services:** Cloud setup, application deployment, server configuration, backup/recovery planning, updates, monitoring and performance work.
- **Infrastructure Overview:** Diagram application, database, storage, backups, monitoring and security; name only technologies actually supported.
- **Maintenance Workflow:** Monitoring → Alert review → Diagnosis → Fix/update → Verification → Reporting.
- **Security & Continuity:** Explain access control, updates, backup retention and recovery procedures; avoid unsupported uptime/security guarantees.
- **Support Plans, FAQs & CTA:** If packages exist, compare actual inclusions and response times. Cover migrations, backups, support and maintenance costs.

Suggested enquiry form fields: Name, work email, company, current platform/provider, application type, current issues and support requirements.

Meta description: Explore cloud hosting setup, application deployment, backups, monitoring and ongoing website and server maintenance for business applications.

4. SEO and On-page Requirements

- One unique H1 per page, supported by relevant H2/H3 headings.
- Unique title tag, meta description and readable URL for every service page.
- Use the primary keyword naturally in the title, H1, introduction and relevant sections.
- Add descriptive image filenames and meaningful alt text.
- Add contextual internal links to related services, portfolio, About and Contact pages.
- Use Service and BreadcrumbList structured data where appropriate and accurate.
- Check canonical URLs, indexability, sitemap inclusion, mobile usability and page performance.
- Configure conversion tracking for enquiry submissions, demo requests and CTA clicks.
- Validate keyword volumes and location demand before final content approval.

5. Internal Linking Suggestions

- Custom Website Development → API & System Integrations; Cloud Hosting & Maintenance.
- Frappe & ERPNext → API & System Integrations; Custom Business Software.
- Hotel Management Software → Custom Business Software; API & System Integrations.
- Custom Business Software → ERPNext; API Integrations; Cloud Hosting.
- API & System Integrations → ERPNext; Website Development; Custom Software.
- Cloud Hosting & Maintenance → Website Development; ERPNext; Custom Software.

6. Proposed Implementation Schedule

Week 1 — Planning: Confirm service scope, target audience, keywords, URLs, content inputs, proof points and wireframes.

Week 2 — Design: Create reusable components and design one representative page for approval before adapting the template.

Week 3 — Development: Build the six responsive pages, integrate approved content and visuals, forms, internal links and metadata.

Week 4 — QA and launch: Test responsive layouts, forms, links, indexability, canonical tags, structured data, performance and analytics.

Schedule note: The four-week timeline is an initial estimate. Final timing depends on feedback turnaround, content and asset availability, and development scope.

7. Client Inputs Required

- Confirmation of the six services and their final names.
- Accurate list of deliverables, features, technologies and integrations for each service.
- Real product screenshots, portfolio links, case studies, testimonials and approved brand assets.
- Target locations and preferred customer segments, if local SEO is required.
- Approved contact details, enquiry routing and preferred CTA wording.
- Any compliance, privacy or wording requirements that must be reflected on the pages.

8. Approval & Sign-off

Please review the proposed structure, visual direction, SEO approach, calls to action and implementation schedule. Approval confirms permission to begin detailed design and page development based on this plan. Final content and feature claims will be verified with the client before publishing.
